# Justi Bambino<sup>®</sup> Deciduous Teeth

**Bambino<sup>®</sup> Teeth** are aesthetic and functional solutions to the problem of empty spaces left by deciduous teeth. Made of a copolymer cross-linked resin, they guarantee impermeability to infiltration thus preventing discoloration and changes in dimensional character. Studied and developed by orthodontic specialists as a simplified alternative to orthodontic appliances. Ideal use as a space holder to insure a correct line of teeth where both articulation and aesthetics are concerned. Use of teeth in articular rehabilitations allows for proper mastication which can only be obtained with perfect articular balance.

Available in single mold, upper and lower anteriors; upper and lower posteriors. Mounted on dark plastic blocks in 2 shades: 59 (milk-white) and 61 (yellow-straw white).

Justi Hardened Plastic Teeth comply with ISO #22112:2005 and ANSI/ADA Specification #15 Published in 1999, identical to ISO Standard #3336:1993
